# Factory Audit (On-Site)

## Overview

Physical verification of your supplier’s existence, production capacity, and machinery. We act as your eyes on the ground in Türkiye to validate reality before you transfer any funds.

## What’s Included

- Physical Site Verification
- Machinery & Stock Inspection
- Production Capacity Analysis
- License & Legal Document Review

48 - 72 Hours per factory

## Success Story

A UK buyer was about to transfer €45,000 for packaging machinery to a supplier found on Alibaba who claimed to be a "large manufacturer."

**Result**

Our audit revealed the "factory" was merely a 50m² showroom with no production line. We prevented a total capital loss and directed the client to a verified manufacturer.

## Why It Matters

In an era of AI and digital noise, a website proves nothing. You need physical proof to ensure the factory is real and capable of delivering your order.

## How We Deliver

Boots-on-the-ground inspection with real-time video evidence.

## Details

### Why Factory Audit Matters?

In global trade, digital presence can be deceptive. A supplier with a professional website may turn out to be a "ghost company," a small trader posing as a factory, or a facility with broken machinery. Without physical verification, you risk falling victim to sophisticated "Deepfake" fraud or engaging with a partner who cannot technically meet your demands. At ACTR, we don't trust digital data; we verify physical reality.

### Our Approach

Our audits are strictly **on-site and physical**. We strip away the marketing layers to reveal the operational truth using a 4-point framework:

- **Physical Existence** – Is the factory actually at the address? Is the signage real? Is the facility active?
- **Machinery Park** – Are the machines running? Do they match the asset list? What is the maintenance status?
- **Stock Levels** – Is there raw material in the warehouse? Is there finished inventory to prove active trade?
- **Workforce Verification** – Are real workers present on the production line, or is the facility a "ghost town"?

### What sets ACTR Apart?

- **The "Anti-Fraud" Mindset** – We don't just check quality; we actively look for signs of deception and misrepresentation.
- **Engineering Background** – As Mechanical Engineers, we understand production lines better than standard sourcing agents.
- **Bursa-Based Speed** – Located in the industrial heart of Türkiye, we can deploy to major zones within hours.
- **Zero Conflicts of Interest** – We represent your interests only. We never take commissions from factories.

### Outcomes You can Expect

By the end of an audit, you'll have:

- A "Go / No-Go" recommendation based on physical proof.
- Unfiltered photos and videos from the factory floor.
- Verified production capacity data vs. claimed capacity.
- Immediate risk alert if any fraud is detected.

Validation is not just about avoiding loss; it is about building a supply chain based on truth, not hope.

### Why Partner with ACTR?

Every remote transaction carries a "blind spot." ACTR removes this blindness. We serve as your physical firewall in Türkiye against digital deception. With our combination of engineering discipline and local presence, you ensure that the supplier you found online is a solid reality on the ground.
Your Technical Eye in Türkiye.
